DETAILED ACTION

Reasons of Allowance

1. The following is an examiner's statement of reasons for allowance: claims 1 – 11 are allowable over the prior art of record for the reasons as stated in the Applicant's argument/amendment filed on March 26, 2007 pages 5 – 10.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

2. In this case, the prior art teaches for establishing a push-to-talk (PTT) call over a wireless communication network suffer from significant call setup times. Typically, a call message from a requesting handset is received by PPT server that subsequently sends out an announce message to the target handset, and in order to send the announce message to the target handset, however, target handset must first be located.

None of the prior art of record teaches or fairly suggests that for initiating a push-to-talk (PPT) call over a wireless network comprises as the connection status message is sent by the PPT server to the requesting handset, the delay in delivering that message is eliminated by sending the message to the requesting handset in a control channel, thus, delivery of the connection status message is not dependent upon establishing a traffic

channel, accordingly, the requesting handset may indicate to the caller that connection has been made and the caller's voice until the traffic channel is established, at that time, the caller's buffered voice signals are sent to the target handset, and together with combination of other element as set forth in the claims.
